

# iPad MultiStand

-an easier way of using your iPad.

A versatile table stand which is perfect for you who use your iPad in several places. You easily place the iPad in the stand, it is then firmly attached wherever you go! Convenient to use anywhere at home, in the car or in the office.

When using the table stand it is easier to carry the iPad around with you. It diminishes the risk to drop it, since the stand is easier to grip than the device itself. You can use the stand in several angles, just adjust the position depending on area of use. Also adapted for use in the lap. In folded position it is almost as thin as the iPad.

You can connect e.g. a charging cable to the iPad when it is in place in the stand, all buttons and connectors are easy accessible. The iPad is used in landscape mode in the stand.

The Brodit MultiStand is made of black ABS plastic. The iPad fits easily in the stand, it is held securely in place but can easily be removed.

On the back of the stand is a movable support leg that makes the stand angle from a flat position to an upright position. The support leg has a shape that makes it comfortable to grip around it with your hand so you can use the iPad while standing and walking.

The stand has friction pads to prevent it from sliding on smooth surfaces.

It also has an adapter included, that can be screwed onto a wall in an office, house, vehicle etc. The MultiStand can be attached to this adapter so you can keep it your iPad in a fixed position for viewing and use.

If you want to be able to attach the stand onto more than one place, you can buy several mounting adapters (see item no 215461).
